Simply put, ABAP programming techniques that were used from the 1980s through April 2000 is typically what developers mean when they refer to "old," "old-fashioned," "classic," or "legacy" ABAP. The advent of object-oriented programming in ABAP and the change in syntax that arrived with release 7.4 unofficially mark the changeover to "new" or "modern" ABAP.

ABAP has made it necessary for developers to modularize, i.e. organizing the programs relatively more, than in the OOPS-based languages that have relatively more built-in modular features. Once a small, modularized section of code is complete, debugged and so on, it does not subsequently have to be returned to, and developers can then move on and focus on other issues.

It really pains me to see the extent to which developers coming from a procedural background fail to grasp the essence of object orientation, as opposed to (new-generation?) developers with Java or C++ backgrounds, who bring sound modelling skills and conceptual OO thinking to the table. Concepts like refactoring, unit testing, polymorphism and interfaces are well-known outside the ABAP sphere ...
