of the most vexing issues for DB2 developers and DBAs. In the past, most shops tried to avoid it, but that is no longer possible for modern systems.

Dynamic SQL and Performance | Datavail

Dynamic SQL is a very reasonable solution. In fact, it can prevent some

Download Free Dynamic Sql Applications Performance And Security

performance problems that arise when SQL statements are optimized the first time a procedure is run. This can result in sub-optimal execution plans for other parameters. My recommendation is to generate exactly the SQL you want.

**sql server - dynamic sql
performance and implementation ...**

Download Free Dynamic Sql Applications Performance And Security

You must know that dynamic SQL will ALWAYS be recompiled. So performance wise it is not a good thing. In this case you might not notice it, but i would still go for the most best practice, not using dynamic sql. Also, if you really must use a dynamic query you might also look into the sp_executesql vs EXEC.
