The flywheel key is a small rectangular piece of metal that keeps the crankshaft and flywheel aligned when you tighten the flywheel nut. To protect expensive engine components from damage, the flywheel key shears off if the mower blade hits an object hard enough to make the flywheel slip out of alignment with the crankshaft. Replace a broken or ...

How to replace the flywheel key on a riding lawn mower

...

When the bar is released, the safety switch engages. This causes a ground that, in turn, causes the coil to stop producing energy to the spark plug. This kills the engine. Also, when engaged or released, a spring-loaded metal strap with a rubber lining presses against the flywheel, acting as a brake helping to stop the engine from turning.
