Solutions For A-329/429 Homework 2 Alex Gurvich October 19th, 2017 Ryden - 5.1 [3 points] In a at single component universe the Friedmann equation takes the form $a'' + 2\frac{\dot{a}}{a}\dot{w} = H_0^2 w a^3(1+w)$ We can easily solve for $a(t)$ by writing $\dot{a} = da/dt$ and putting all the terms on one side and the dt on the other, then integrating. $\int \frac{da}{a^2} + 3\frac{dw}{2w} = \int dt H_0^2 p w a(t) = 3 + 3w^2 H_0^2 p w t^2 3+3w$

Solutions For A-329/429 Homework 2

Elisabeth Ryden Benjamin. Tweet. Before the New York State Joint Legislative Hearing on Exploring Solutions on the Disproportionate Impact of COVID-19 on Minority Communities . The Community Service Society of New York (CSS) would like to thank the Chairs and members of the Senate and Assembly Committees, Caucus and Task Forces for holding this ...

Ph 444 Solutions for Problem Set 1 1. (Ryden 2.2) To decide how far one can see on average in a universe filled with spherical objects of radius R , it is simplest to think of a long cylinder along the line of sight. If an object is closer than R to the line of sight, then the line of sight intersects its surface.

Professor Barbara Ryden SOLUTIONS TO PROBLEM SET # 5

1)[20points]Einsteinshowedthatmass(M)andenergy(E)areinterchange-able: $E = Mc^2$, where c is the speed of light. This implies, for instance, that 1 kilogram of matter is equivalent to an energy $E = (1\text{kg})(3\times 10^8 \text{ m}=\text{sec})^2 = 9\times 10^{16} \text{ kgm}^2=\text{sec}^2$. An energy of $1\text{kgm}^2=\text{sec}^2$ is known as 1 joule, for short.

SOLUTIONS TO PROBLEM SET # 5

Curvature f slightly modified from Ryden Ch. 3 Qu. 3.2 and 3.3g Consider yourself a 2-dimensional being living on the surface of the Earth, modeled as a perfect sphere radius $R= 6371\text{km}$. In this 2D world, light travels on the surface of the Earth. Cosmology - 5 (a)The metric is $ds^2= dr + R^2\sin$

Homework Solutions 2 (Ryden Chapter 3) 3 On a circle, r is constant, so $dr= 0$. Therefore $dl= R\sin(r=R)d$, and the circumference is $C= \int_0^{2\pi} R\sin r R Z 2^{\sim} 0 d = 2^{\sim} R\sin r R$ The deviation from atness is $C= 2^{\sim} r 2^{\sim} R\sin r R \sim 2^{\sim} r 2^{\sim} R r R 1 3! r^3 R^3! = \sim 3 r^3 R^2$ where the approximate value is for $r \ll R$. To get $C > 1 \text{ m}$, we need $r > 0:0053R= 3:4 10^4 \text{ m}$.
