Uses of Petroleum: 6 Main Uses of Petroleum - Discussed!

The <main> tag specifies the main content of a document. The content inside the <main> element should be unique to the document. It should not contain any content that is repeated across documents such as sidebars, navigation links, copyright information, site logos, and search forms. Note: There must not be more than one <main> element in a document.

HTML main Tag - W3Schools

Crude oil and other liquids produced from fossil fuels are refined into petroleum products that people use for many different purposes. Biofuels are also used as petroleum products, mainly in mixtures with gasoline and diesel fuel. Petroleum is the largest U.S. energy source. We use petroleum products to propel vehicles, to heat buildings, and to produce electricity.

Use of oil - U.S. Energy Information Administration (EIA)

It is used as a prerequisite for the complete automation of high-speed production lines, and is applied to process research, mixing, maintenance and the study of wear and corrosion of facilities and machinery.

Uses Of Nuclear Technology

For example, older toilets use up to six gallons per flush, whereas low-flow toilets (or any toilet manufactured after 1994) use 1.6 gallons or less. Likewise, older showerheads flow well over the federal limit of 2.5 gallons per minute, while low-flow models can flow no higher than two gallons per minute.
